Secured Belongings

Semsil Technologies Pvt Ltd.
Bangalore

44, 3rd Cross, Vallabhanagar; Konankunte Cross
Road, Bangalore 560062

Doc No: SSTPL/SS-01/2018

Introduction:

Security for personal belongings is utmost important for every one and safeguarding the same is not so easy these days. The market is flooded with electronic / optical devices (CCTV) for watching house break-ins. In spite of installing these hi-tech devices, we continue to face break-in issues and loosing valuable belongings for known reasons. These high-tech devices come with a burning cost, which many house holds can not afford. Also these devices do not work if there is no internet connection or server down situations putting consumers at a difficult situation. Today, there are no affordable, simple solutions available for various break-in issues, such as house burglary, safe rooms, valuable lockers, containers / wagons transporting expensive goods, commodities, automotive theft and many applications. Many of the above applications can not be linked / connected with high-tech internet / wifi applications and remain gray areas for security access.

RIGHT SOLUTION ?

SEMSIL TECHNOLOGIES PVT LTD. Bangalore have developed a simple and affordable security device for every wake of application mentioned above. When any break-ins occur, their respective owners are alerted with an audible message. For eg., if any house break-in occurs, the respective house owner receives an alert message (**“House Break-in Alert”, take action**) on their mobile, allowing immediate action by the owners. Any safe room break-ins will alert the respective owners with a SMS message(**“Safe Room break-in Alert”, take action**) and so on, allowing respective owners to take immediate action. House holds can also register with nearby police stations during their vacations, so the alert messages will be sent to the police stations, who can take immediate action when they receive alert messages. Every house hold is programmed with a secret codes (custom codes) with particulars, which are known only to the owners and registered police stations.

Smart SHABDH™ IS Fully secured device for many applications.

Smart SHABDH™ is very affordable and easy to install inside the house, and matches with home interior colours and not easily noticeable. **Smart SHABDH™** comes in a miniature size and a long life re-chargeable battery, programmed with a “low battery” alerts as well.
